Palmira Golf and Country Club - HOA
C/O KEB Management Services
6017 Pine Ridge Rd. #262
Naples, FL 34119

Ref: Cane Toad Report – May 2025

Visits took place this month -

Friday Night, May 2nd HALF
Friday Night, May 9th FULL
Friday Night, May 23rd HALF

Summary of Visit – A thorough inspection of the HOA's common grounds (streets and amenity areas throughout Palmira) took place for the removal of the invasive Cane toads. There was an estimated count of 260-270 Cane toads removed throughout this month. The areas reported from Management and/or Owners have been checked well and we will keep on our radar for future visits. We highly recommend that Owners keep lights off at night, or switch to bug lightbulbs. This will help keep the Cane toads from hanging out close to homes, under lights.

The warmer weather is here, which makes the Cane toads much more active. We have been working with the CDD on tadpole removal visits. Please continue to report to us right away when tadpoles are seen in any lake. We would expect the tadpoles to be coming to an end now for the first round of breeding.

**Native Southern Toads are present in this community as well, not all are Cane Toads. Invoice attached. Picture below shows some of the catch for this month.

Upcoming Visits: The below dates are tentatively scheduled for the 2025 year -

Friday Night, June 6th HALF
Friday Night, June 13th FULL
Friday Night, June 27th HALF
Thursday Night, July 3rd HALF
Friday Night, July 11th FULL
Friday Night, July 25th HALF
Friday Night, August 1st HALF
Friday Night, August 8th FULL
Friday Night, August 22nd HALF
Friday Night, September 5th HALF
Friday Night, September 12th FULL

 Tuesday Night, November 25th HALF

Identifying a Cane Toad

Remove the invasive species

One of the easiest ways to tell the Cane toad and Native toad apart is by looking on top of their head. The Southern toad, native to Florida, has a crest on top of their head. Think of the crest as a crown, and they should be treated as royalty. The toads with the crown can be left alone. The invasive Cane toad has a smooth head. They do not have the crest like the Southern toads.

Above Pictures: The top picture is a Southern toad, showing the crest on top of the head. The bottom picture is a Cane toad, showing the smooth head, no crest.
